Production Plans

- MC12 - mostly finished. A few jobs in not assigned status.
- proc9 - Done.
- The Phase III data will also be skimmed, as soon as proc9 is ready on the grid.
- More realistic beam background overlay files (simulated) are ready ([BIIDP-1609 - Getting issue details...](#)).

After the background files are distributed to grid, we will plan to have a new MC campaign. Run-dependent MC and a few data samples will also be processed, once the appropriate GT is finalized.

Production Status

08 Nov 2019 SKIMDATAx1 campaign has launched.

24 Oct 2019 No additional news from Production team. A few production jobs are submitted and skim/merge jobs only processed.

Date: 2019-09-03

Not mentioned about skimming. Assume situation is the same as reported in 8/12.

The location of the samples at KEKCC and on the grid are detailed on the Phase 3 page: <https://confluence.desy.de/display/BI/Phase+3+data>. The samples are separated into proc9, which includes everything up to exp 8, run 1835 (including the off-resonance sample), and bucket7, which includes exp 8 runs 1836-3123.

The next reprocessing, proc10, will use release-04 (pending release next month) and will feature significant updates for some calibration code.

Beam backgrounds and validation samples:

New beam background overlay files for release-04 have been prepared. Details are available at <https://confluence.desy.de/display/BI/Beam+background+samples>.

The DP group is producing validation samples for release-04. Details are given in <https://agira.desy.de/browse/BII-5150> and the associated sub-tickets.

MC production:

New, run-dependent MC samples, approximately corresponding to proc9, have been produced. Details are available on <https://confluence.desy.de/display/BI/Data+Production+Run+Dependent+MC>. It is important to note that beam background overlay samples are only available for a subset of runs and only for the pseudorandom trigger (not delayed Bhabhas). It is also the case that not all detectors are ready for run-dependent MC (a goal for release-04). A total of approximately 10/fb equivalent generic samples will be produced, along with signal sample upon request.

Most MC12 samples are now finished. Additional signal requests will be accepted, but jobs are not likely to saturate the system for a while, at least.

Therefore, only limited number of sites are expected to run jobs

Analysis skimming (uDSTs)

The first skim campaign for MC12 is now complete. Details of available analysis skims are given at <https://confluence.desy.de/display/BI/MC12+Skim+Production>. The second MC12 skim campaign, which will include charm and semileptonic FEI skims, is currently under preparation and will be processed soon. The Phase III data will also be skimmed, as soon as proc9 is ready on the grid.

- 2019-10-16 File transfer failures: [BIIDCO-2067](#) - Getting issue details... STATUS

FTS

- Any problem in the FTS service or FTS monitoring are to be recorded here. Site/SE specific issues are to be recorded under each Site /SE
- Note that the FTS dashboard we use is an "old" instance and not well-maintained. We, Belle II members in general, do not have access to the "new" monitoring. When the dashboard is down, the shifters just need to notify the expert and skip the corresponding part of their work. The expert should check the new monitoring, for the access to the monitoring page is limited.
