

# Mathematica License Server

zitlic01.desy.de has been retired. Please use - depending on your affiliation - one of the following license server.

```
# DESY:                Use !zitlic03.desy.de
# University Hamburg: Use !lizenzsrv9.rrz.uni-hamburg.de AND !mathematical0.rrz.uni-hamburg.de
# MPSD:                Use !flex1.mpsd.mpg.de
# Eur.XFEL:           Use !exfllic01.desy.de
```

The location of the license file named `mathpass` depends (of course) on the operating system in use:

```
Location of the mathpass file:
Linux:  /usr/share/Mathematica/Licensing/mathpass
Windows: \ProgramData\Mathematica\Licensing\mathpas
Mac:   /Library/Mathematica/Licensing/mathpass
```

To give some examples:

```
# Under Linux (example for UNI-HH):
cat <<eof> $HOME/.Mathematica/Licensing/mathpass
!lizenzsrv9.rrz.uni-hamburg.de
!mathematical0.rrz.uni-hamburg.de
!mathematical1.rrz.uni-hamburg.de
!mathematical2.rrz.uni-hamburg.de
eof
## choose /usr/share/Mathematica/Licensing/mathpass   to set the license server system wide
## Please consult https://www.rrz.uni-hamburg.de/services/software/software-thematisch/software-alpha/mathematica.html for uptodate information!

# Under Windows: Set the license server in C:\ProgramData\Mathematica\Licensing\mathpass. The mathpass-file
should contain a single line:
!<my-mathematica-license server>
# in case of DESY:
!zitlic03.desy.de

# Under MacOSX: Set the license server in /Library/Mathematica/Licensing/mathpass. The mathpass-file should
contain a single line:
!<my-mathematica-license server>
# in case of MPSD:
!flex1.mpsd.mpg.de
```

To check which license server is being used:

- have a look at the `mathpass` file or
- issue the command `$LicenseServer` in `mathematica` or
- use the Mathematica GUI under `Help->AboutSystem Information Kernel`
