

LaVue - HTTP response

Images from http response serves, e.g. EigerDectris

The **HTTP response** image source frame contains the following fields:

- **URL:** selects the url or its shortcut to the detector HTTP server.
e.g. `http://haso228eiger/monitor/api/1.5.0/images/monitor` or `haso228eiger/1.5.0`.
The possible URLs can be preselected in the configuration dialog.
- **Status:** shows the connection status. It also displays a port of ZMQ security stream if it is enabled.
- **Start/Stop** button to launch or interrupt image querying
