

Groupadmin Documentation

The Groupadmin is the link between the central DESY It Service and the users in the groups. We give the admins the opportunity to

- Manage the nodes of a group with [Foreman](#)
- [Install new nodes](#)
- [Add software](#)
- Change the configuration using our configuration management [Puppet](#). No account is required to access the documentation. In order to get access to the configuration management system, please sent us an email to linux@desy.de .
